Ngo Gia Huan

Full-Stack Developer (TypeScript)

Ho Chi Minh City, Vietnam | +84 911 685 725 | huanngdev@gmail.com
huanngdev.site | github.com/huanngdev | linkedin.com/in/huanngdev

Full-stack TypeScript developer: 9 months at Formo, a Web3 analytics startup, shipping API keys, a CLI, and an MCP server to production customers, after a 9-month FPT Software internship leading a frontend team. Hackathon winner (Walrus Session 2) and author of richcn, an open-source Notion-style editor.

WORK EXPERIENCE

Full-Stack Developer - Formo 09/2025 - 05/2026 | Ho Chi Minh City, Vietnam

Web3 analytics and attribution platform. 4-developer team; English as the working language.

- Designed and shipped Workspace API Keys end to end: database schema, scoped permissions, backend APIs, and the management UI, giving customers programmatic access to their workspace data.
- Built the Formo CLI, giving authenticated access to analytics, profiles, dashboards, alerts, contracts, and segments.
- Built an MCP server, an MVP client, and docs that let AI assistants query project-scoped analytics.
- Integrated Trigger.dev (jobs), Tinybird (ClickHouse APIs), Checkly (monitoring), and Supabase (auth, storage).
- Shipped UI and backend improvements across Next.js and Express, covered by automated tests.

Frontend Developer Intern, Team Lead - FPT Software 09/2024 - 05/2025 | Ho Chi Minh City, Vietnam

FAMS: internal web app used by FPT Software staff and interns to manage internships, tasks, and intern evaluations.

- Led a frontend team of about 10 interns: split features into tasks, assigned work, and coordinated with the backend team.
- Personally built the core modules (authentication, authorization, shared dashboard) with Next.js and Redux Toolkit.
- Designed the UI in Figma and set up the shared component foundation and page templates the team built on.

PROJECTS

richcn OPEN SOURCE richcn.huanngdev.site Source 06/2026 - Present

Notion-style block editor for React and shadcn/ui, built on Plate and installable with one `npx shadcn add` command.

- Built the slash menu, drag handles, tables, columns, toggles, media blocks, mentions, and an autosave persistence adapter that lets the host app choose its storage.
- Published 8 components and 3 blocks as a shadcn registry, with docs and llms.txt for AI coding tools.

React · TypeScript · Next.js · Plate · shadcn/ui · Tailwind CSS

MarkQ OPEN SOURCE · MIT github.com/huanngdev/markq

Self-hosted quiz app that turns Markdown files into interactive tests.

- Kept grading server-authoritative so correct answers never reach the browser, and stored immutable attempt snapshots so past reviews stay accurate after a quiz changes.
- Validated input with Zod; unit-tested grading, persistence, migrations, and analytics in GitHub Actions CI.

Next.js · TypeScript · SQLite · Drizzle · Zod · Bun

WalForm 1ST PLACE · LIVE walform.wal.app Source

Decentralized form builder on Sui with client-side encryption and AI-assisted form generation, built in four weeks.

- Led a two-person team and owned the frontend: drag-and-drop builder and Seal and Walrus integrations.

React · TypeScript · Sui · Move · Walrus · Seal

SKILLS

Languages	TypeScript, JavaScript, HTML, CSS, Move
Frontend	React, Next.js, Tailwind CSS, shadcn/ui, Redux Toolkit, Zustand
Backend and data	Node.js, Express, Hono, REST APIs, PostgreSQL, Prisma, Drizzle, Redis, ClickHouse, Supabase
Testing, DevOps, tools	Bun test, GitHub Actions, Docker, Vercel, Railway, AWS, Git, Turborepo, Figma
AI and Web3	MCP, Vercel AI SDK, Sui, Walrus, Seal

EDUCATION AND AWARDS

FPT University Bachelor of Software Engineering 10/2021 - 05/2025

1st place - Walrus Session 2, Form Tooling track (WalForm) Announcement 05/2026

2nd place - First Mover Hackathon (Relic of Lie, an on-chain card game) 02/2026

Languages: Vietnamese (native), English (professional working proficiency; daily working language at Formo)
