

Ngo Gia Huan

JUNIOR FULL-STACK ENGINEER · TYPESCRIPT · NEXT.JS · NODE.JS

Ho Chi Minh City, Vietnam | +84 911 685 725
huangngdev@gmail.com | huangngdev.site
github.com/huangngdev | linkedin.com/in/huangngdev
Vietnamese (Native) | English (Intermediate)

Frontend-focused full-stack engineer with 18 months of internship and full-time experience shipping TypeScript products at FPT Software and Formo. Built product APIs, an authenticated CLI, and MCP integrations across Next.js, Express, ClickHouse, and Redis. Hackathon winner on Sui and Walrus, strongest in UI engineering, API integration, and end-to-end feature ownership.

TECHNICAL SKILLS

Frontend	TypeScript, JavaScript, React, Next.js, HTML, CSS, Tailwind CSS, shadcn/ui
Backend and data	Node.js, Express, Hono, REST APIs, PostgreSQL, Redis, ClickHouse
Infrastructure	Docker, AWS, GitHub Actions, Vercel, Railway
Web3	Sui, Move, Walrus, Seal
Tools	Git, Figma, Turborepo, Bun

EXPERIENCE

Freelance Fullstack Developer June 2026 - Present | Remote
Building and maintaining independent full-stack products with Next.js and TypeScript.

Fullstack Developer - Formo September 2025 - May 2026 | Ho Chi Minh City, Vietnam

- Owned the design and delivery of Workspace API Keys, covering database schema, scoped permissions, backend APIs, and the management UI.
- Built an authenticated CLI spanning six product domains: analytics, profiles, dashboards, alerts, contracts, and segments.
- Shipped an MCP server, MVP client, and documentation for exposing project-scoped analytics to external AI clients.
- Integrated automation, monitoring, authentication, and analytics infrastructure with Trigger.dev, Checkly, Supabase, and Tinybird.

Frontend Developer Intern - FPT Software September 2024 - May 2025 | Ho Chi Minh City, Vietnam

- Implemented the frontend for FAMS, a student management application delivered by a 10-person project team.
- Created the shared UI foundation and reusable templates with Next.js and React.
- Implemented client state with Redux Toolkit and integrated APIs with the backend team.

SELECTED PROJECTS

WalForm TOP 1 · LIVE [Live](#) [Source](#)

Shipped a decentralized form builder with customizable forms, client-side encryption, and AI-assisted generation in four weeks.
Contribution: Owned all frontend engineering in a two-person team. Won Top 1 and continued to support later Walrus sessions.
Tech stack React · TypeScript · Sui · Move · Walrus · Seal

MarkQ OPEN SOURCE [Source](#)

Built a Markdown-first quiz engine with server-authoritative grading, answer review, analytics, and persistent attempt history.
Contribution: Designed the quiz format and full-stack application, including validation, autosave, immutable review snapshots, tests, and CI.
Tech stack Next.js · TypeScript · SQLite · Drizzle · shadcn/ui

Sui Stream HACKATHON [Live demo](#)

Solo-built a fast short-video experience using Walrus's public aggregator and Sui contracts for video objects, uploads, donations, viewer missions, views, comments, and likes.
Contribution: Owned the responsive frontend and Move smart contracts, delivering a complete working demo.
Tech stack Next.js · TypeScript · Sui · Move · Walrus

EDUCATION & RECOGNITION

FPT University	Bachelor of Software Engineering	October 2021 - May 2025
Awards	Top 1 - Walrus Session 2, Form Tooling track	WalForm · 2026
	Top 2 - First Mover Hackathon	Relic of Lie · Feb 2026

SELECTED COURSEWORK

User Experience Research and Design Coursera · May 2024
